Before I was a MEAN stack developer, I was in the U.S. Army as an infantryman. JavaScript is my favorite language to develop in and I am always looking for more ways to further myself as a developer.

---

## Skills

- JavaScript
- NodeJS
- CSS3
- Angular
- HTML
- RESTful API
- MongoDB
- REACT

---

## Experience

JANUARY 2017 – PRESENT

### **Web Developer / TriDigital Marketing, Dallas TX**

I currently develop the websites for their marketing clients based on the designs I am given. I create and develop all functionality for these sites. I have completed 5 sites so far.

- Working on demanding timelines to push websites out on time.
- Using JavaScript libraries and my own implementations to create all functionality.
- Implement all design and animations with CSS and JQuery.
- Developing websites based on design

MAY 2013 – AUGUST 2016

### **Infantryman / U.S. Armed Forces, El Paso TX**

In the military I was taught leadership, team work, loyalty, honor and the ability to work until the job is complete to the absolute best of my ability. My time taught me to work well in a team environment and work as hard as I can.

---

## Education

DECEMBER 2016

### **Web Dev program graduate / DevMountain, Dallas, TX**

I liked having the experience of a developer boot camp over a CS program at a traditional college. It was fast paced and more of what I was used to in the military. It taught me to use my “outside the box” thinking in the world of developing.

---

## Activities

Some of my current passions are learning more about React, Redux, SQL, and possibly building on large scale applications. Once I have mastered React I would like to work with React native. Outside of work I like to spend time with my wife, daughter and soon to be son.
